

Correlations between stellar dynamics and metallicity in the discs

Semi-analytic chemodynamical model of the Milky Way

Jan Rybizki (Supervisor: Andreas Just)

Local disc model: Just & Jahreiß (2010)

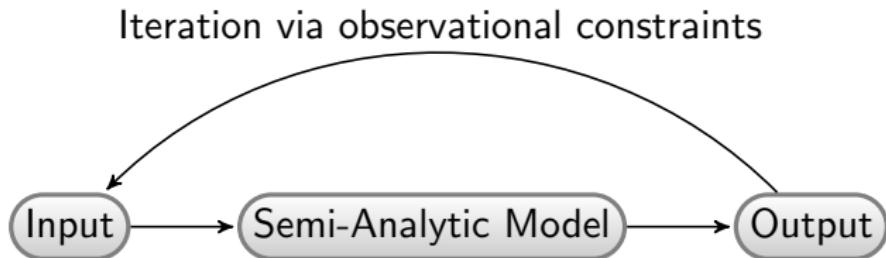

Local disc model: Just & Jahreiß (2010)

① Input

- star formation history
 $SFR(t)$
- age-velocity dispersion relation
 $\sigma_w(\text{age})$
- metallicities
 $[\text{Fe}/\text{H}](t)$
- mass distribution
- initial mass function

Local disc model: Just & Jahreiß (2010)

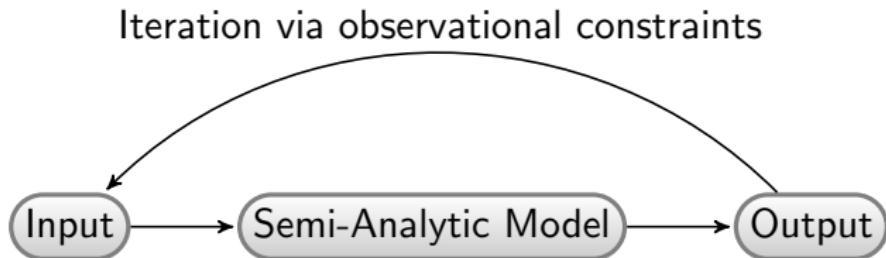

① Input

- star formation history
SFR(t)
- age-velocity dispersion relation
 $\sigma_w(\text{age})$
- metallicities
[Fe/H](t)
- mass distribution
- initial mass function

② Time evolution

- solving Poisson equation
- stellar evolution from population synthesis

Local disc model: Just & Jahreiß (2010)

① Input

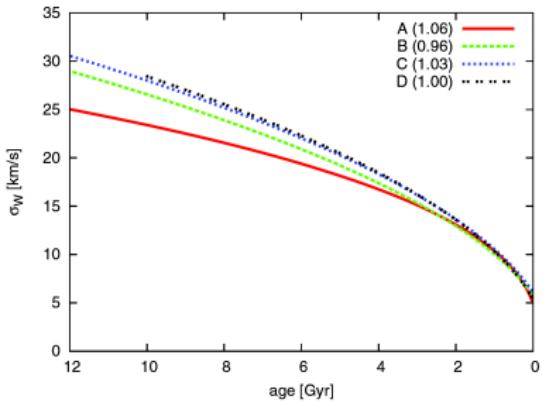

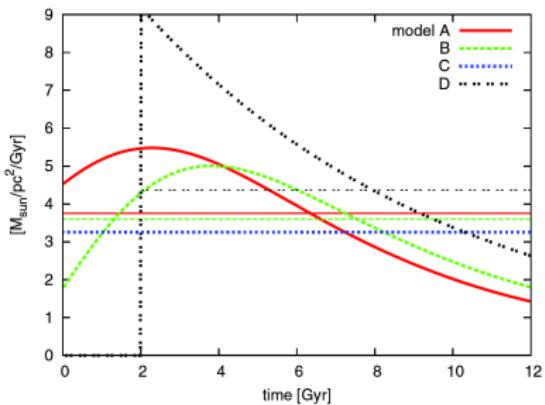

- star formation history
 $SFR(t)$
- age-velocity dispersion relation
 $\sigma_w(\text{age})$
- metallicities
 $[\text{Fe}/\text{H}](t)$
- mass distribution
- initial mass function

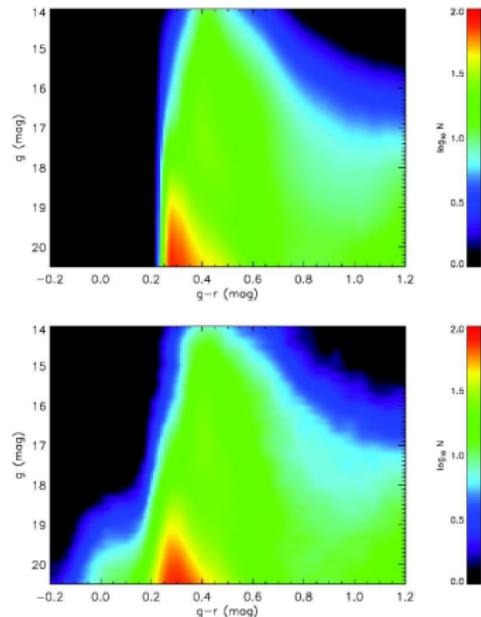

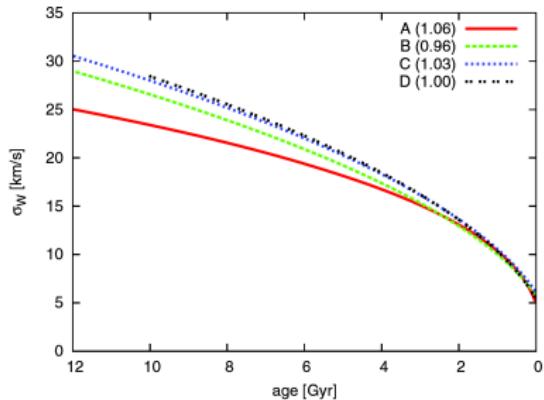

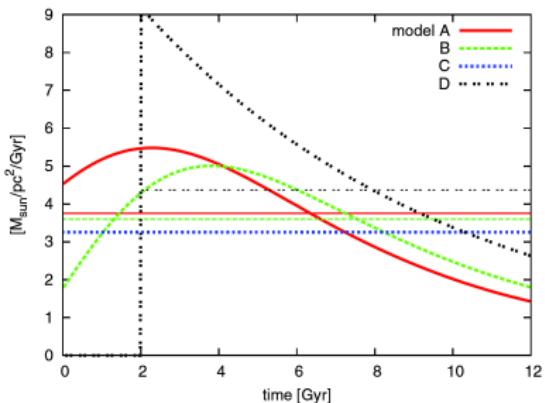

② Time evolution

- solving Poisson equation
- stellar evolution from population synthesis

③ Output of observables

- $[\text{Fe}/\text{H}](z)$ distributions
- kinematics above the plane
- vertical density profiles
 $\rho(z, \text{age})$

- Local disc profiles fit F-K dwarf distribution in SDSS very well at $b=90^\circ$

Constraining the star formation history

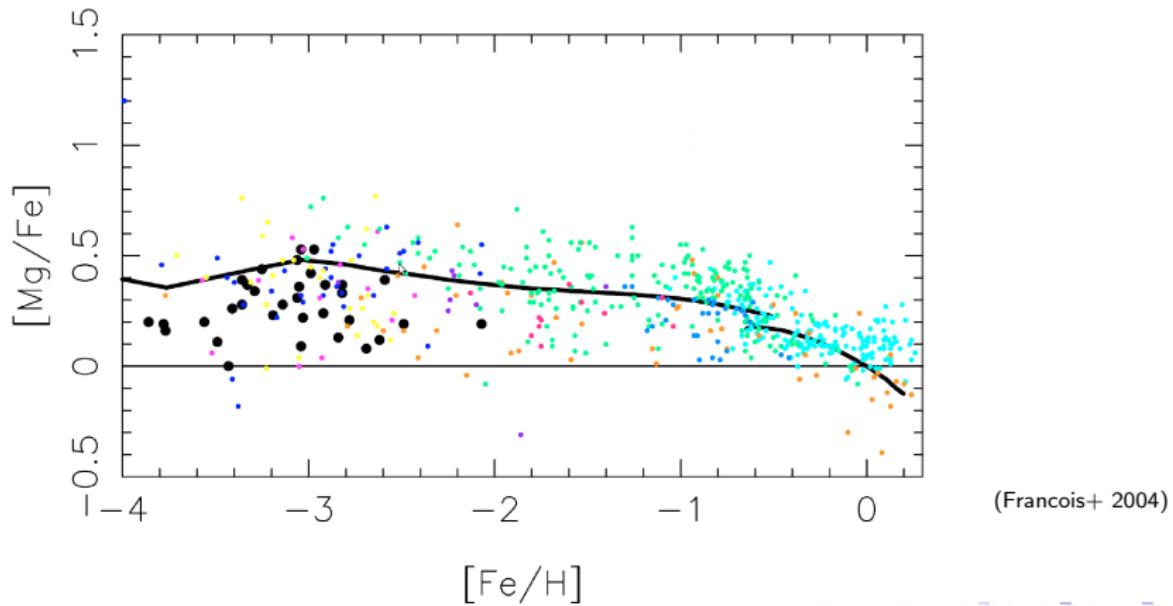

- Select tracer elements

Constraining the star formation history

- Select tracer elements
- Include prescriptions for their chemical enrichment processes

Constraining the star formation history

- Select tracer elements
- Include prescriptions for their chemical enrichment processes
⇒ increase constraining observables and overcome degeneracy of SFR

Constraining the Milky Way Assembly history

- Extend the model to different radii

Constraining the Milky Way Assembly history

- Extend the model to different radii
⇒ Constrain the star formation history at different radii

Constraining the Milky Way Assembly history

- Extend the model to different radii
⇒ Constrain the star formation history at different radii
- Include radial migration

Constraining the Milky Way Assembly history

- Extend the model to different radii
⇒ Constrain the star formation history at different radii
- Include radial migration

- Need suitable observational data
⇒ RAVE, SEGUE, GCS

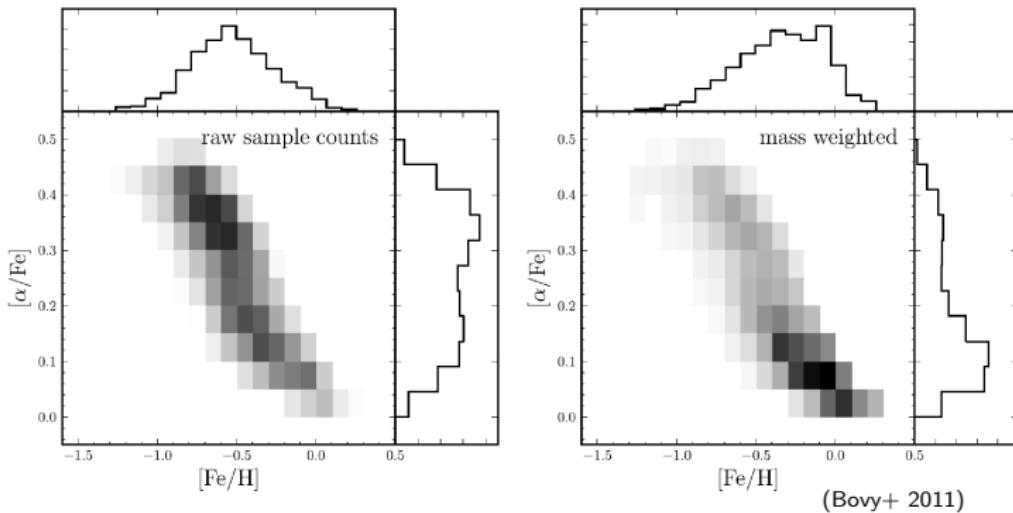

My personal wish list

My personal wish list

- Overcome instantaneous recycling approximation

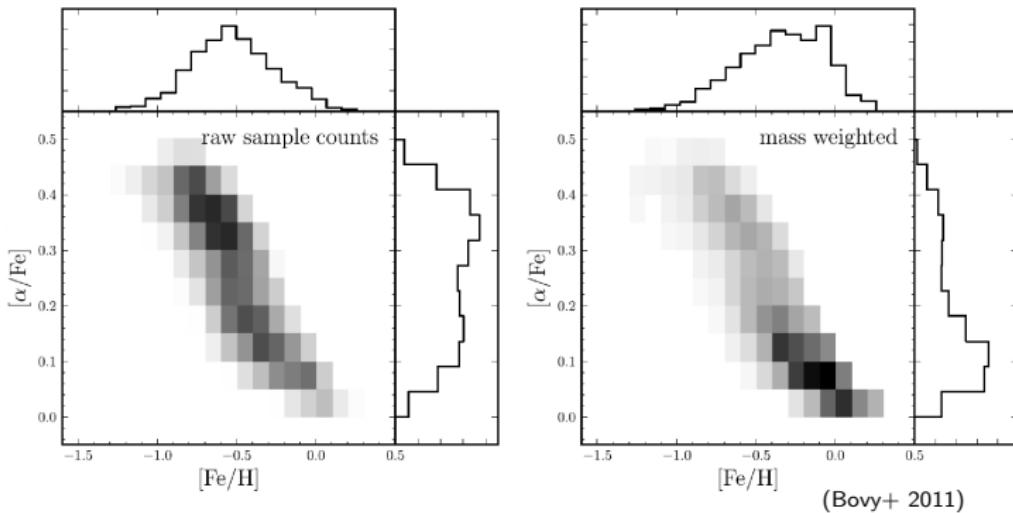

My personal wish list

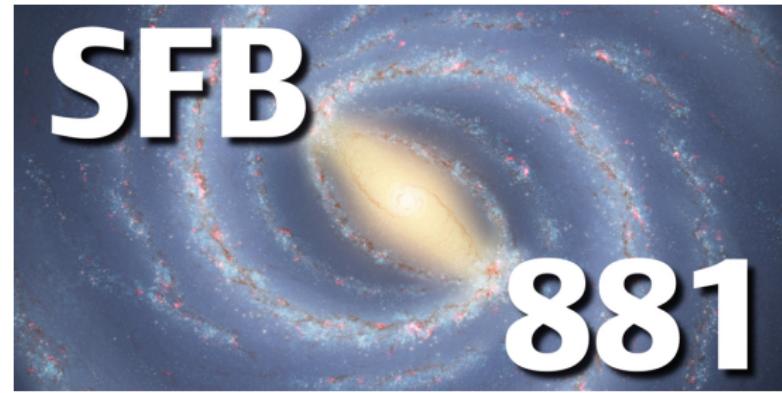

- Overcome instantaneous recycling approximation
- Omit observational biases (selection function)

My personal wish list

- Overcome instantaneous recycling approximation
- Omit observational biases (selection function)
- Gaia ESO Survey data release before 2014
