The J-PAS Survey: a picture of the sky in 56 colors

Silvia Bonoli
and the J-PAS collaboration

Bologna - 12 January 2016

Outline

- ✓ Introduction
- ✓ The J-PAS survey
- ✓ The J-PLUS survey
- ✓ Forecasts (Special focus on Quasars)

The J-PAS survey: a picture of the sky in 56 colors

The J-PAS survey: a picture of the sky in 56 colors

Introduction - J-PAS and J-PLUS – Forecasts

The Hubble deep field

The *Illustris* simulation

A hydrodynamic simulation
of a $\sim(100\text{Mpc})^3$ volume

The J-PAS survey: a picture of the sky in 56 colors

Introduction - J-PAS and J-PLUS – Forecasts

The Eagle Simulations

EVOLUTION AND ASSEMBLY OF GALAXIES AND THEIR ENVIRONMENTS

The Hubble Sequence realised in cosmological simulations

The Hubble Tuning Fork

Ellipticals

E2

E6

Sa

The J-PAS survey: a picture of the sky in 56 colors

Introduction - J-PAS and

**Type Ia
Supernovae**

BAO

Principal probes of cosmology

Clusters

Weak Lensing

Type Ia Supernovae

Standard candles

Requirements: Spectroscopic follow-up,
understanding of systematics

Standard ruler

Ruler: the sound horizon at the epoch of recombination

Enhancement in the correlation function of matter at ~ 150 Mpc

Credit: Eric Huff, the SDSS-III team, and the South Pole Telescope team

BAO from the correlation function of SDSS Luminous Red Galaxies ($0.1 < z < 0.5$)
Eisenstein et al 2005

BAO peak from the $\text{Ly}\alpha$ forest in the BOSS survey
Busca et al. 2013

Measurement of the BAO peak from the clustering of Emission Line Galaxies in the WiggleZ survey ($0.4 < z < 1$)
Blake et al. 2011

Requirements: large volumes. Ideally at multiple redshifts.
Very good z precision.

The J-PAS survey: a picture of the sky in 56 colors

Introduction - J-PAS and J-PLUS – Forecasts

Distortion in the shape of distant galaxies due to matter overdensities along the line of sight

Abell 2218

Weak lensing mass map from DES science verification data (Melchior et al. 2015)

Requirements: Superb-quality images, proper treatment of intrinsic alignment, good redshifts to separate foreground and background objects

Weak Lensing

Cluster abundances for constraining the growth of structure

Richness: number of galaxies in a specified luminosity and color range within a fiducial radius.

- Optical/IR galaxy richness
- X-ray
- SZ in CMB
- lensing

Requirements: large number density of galaxies, calibration observable/mass relation.

Rozo et al. 2014 – Sloan and Planck

Clusters

Wen et al. 2014 – Rich clusters MF@ $z \sim 0.2$

Photometric

vs.

Spectroscopic

- Large Volumes
- High number density
- Evenly sampled (no pre-selection)
- Deep

- Precise z
- Provide SED

The Javalambre-PAU Astrophysical Survey

A Spanish-Brazilian collaboration,
the J-PAS survey will scan
 $\sim 8500 \text{ deg}^2$ of the northern sky
with 54 narrow-band filters covering
the whole optical range
from the dedicated 2.5m telescope in
the *sierra of Javalambre*

The Javalambre-PAU Astrophysical Survey

Javalambre

The telescope

T250

M1 (\varnothing) = 2.55 m

FoV (\varnothing) = 3 deg = 476 mm at FP

Effective collecting area = 3.89 m²

Etendue = 27.5 m²deg²

1st light Sept 2014

Current status: final engineering commissioning

The 'interim' camera (JPAS-PF) will be mounted at the beginning of 2016 for first scientific data

The filter system

- **54 NB filters**
(FWHM \sim 145Å; $\Delta\lambda\sim$ 10nm)
From 3785Å to 9100Å
- **1 Blue MB filter**
(FWHM \sim 260Å; $\lambda_c\sim$ 3600Å)
- **1 Red BB filter**
(FWHM \sim 620Å; $\lambda_c\sim$ 9500Å)
- **Sloan u, g, r**

Pseudo-spectrum ($R\sim 50$) in every pixel of the sky down to $M_{AB} \sim 22.5-24$

The filter system

Photo-z precision as
good as $0.003(1+z)$

200M galaxies
90M LRG+ELG
Ms of quasars

The camera JPCam

1.2 Giga pixels
(14 CCD of 9200x9200)
0.22 arcsec/pixel
4.5 deg²

Galactica: a facility for amateur astronomy

Type Ia Supernovae

- ~4000 SNIa
- exposure cadence
- redshift from SN SED or host galaxy
- characterization of environment

- 700k clusters with more than 10 members – down to ~few $10^{13} M_{\text{sun}}$
- Combine lensing and optical richness for mass calibration

Clusters

BAO

- 90M galaxies (LRG, ELG) with photo-z precision of $0.003(1+z)$
- At high-z QSO and LAE

- Very good median seeing @ the OAJ
- BB images taken during best nights
- Redshift precision for lenses and background galaxies

Weak Lensing

Galaxy evolution

- Low-res spectra \rightarrow very good photo-z and good sampling of SED
- very large statistics \rightarrow hundreds of millions of galaxies of all types
- Uniform spatial sampling \rightarrow environmental studies at large and small scales
- IFU-like approach \rightarrow study spatial variation of properties of nearby galaxies

- Stellar population studies as a function of redshift and environment (ages, SFR, presence of AGN)
- Ly-alpha emitters and Ly-break galaxies at $z > 2$

UGC09476
From T80Cam
commissioning data

H α emission from CALIFA
(IFU survey @ Calar Alto)

HII regions detected
with J-PLUS filters

Quasar selection with medium and narrow band photometry

Multipurpose quasars

For cosmology...

Trace the large-scale distribution of structures – test cosmological principle

The J-PAS survey: a picture of the sky in 50 colors

Quasars in medium and narrow bands

Multipurpose quasars

For cosmology...

Trace the large-scale distribution of structures – test cosmological principle

Trace the distribution of the IGM and study the end of reionization

Becker et al. 2001

Quasars in medium and narrow bands

Multipurpose quasars

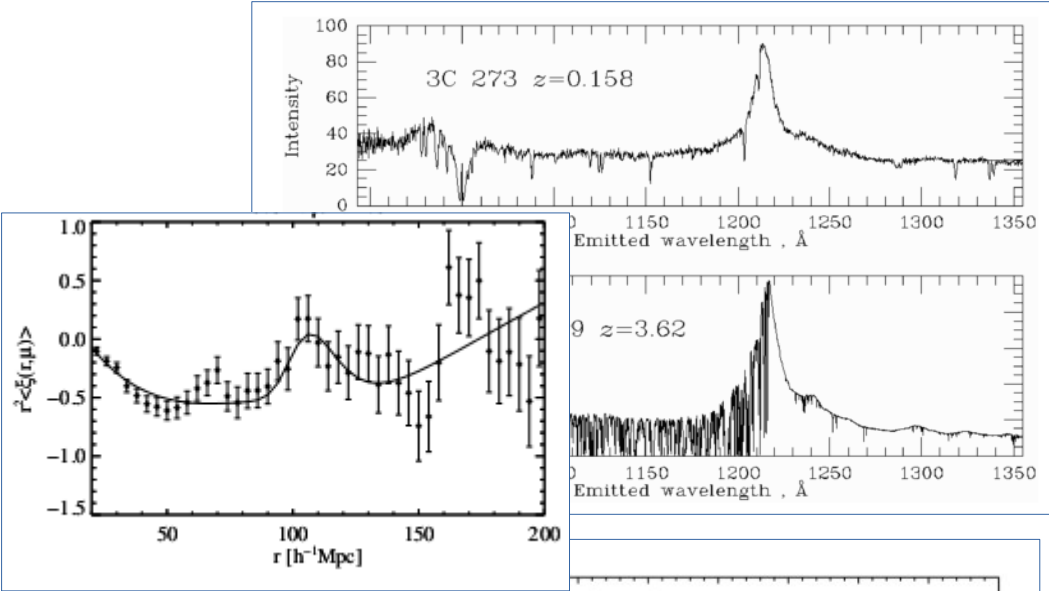

For cosmology...

Trace the large-scale distribution of structures – test cosmological principle

Cowes et al. 2013

Trace the distribution of the IGM and study the end of reionization

BAO peak from the flux correlation function of the Ly α forest of BOSS quasars (Busca et al. 2013)

Quasars in medium and narrow bands

Multipurpose quasars

For black hole physics...

Estimate the mass-growth of supermassive black holes across cosmic time

Merloni & Heinz

Constrain models of black hole “seeds”

Bonoli et al. 2014

Multipurpose quasars

Study black hole-galaxy co-evolution

McConnell & Ma

Croton et al. 2006

Quasar selection

Very **strong** and **broad** emission lines indicating Doppler widths up to 25000 km/s

Quasar selection

Vanden Berk et al 2001

Very **strong** and **broad** emission lines indicating Doppler widths up to 25000 km/s

SDSS
Richards et al. 2002

Mid- z ($2.5 < z < 3$) problem

Quasars in medium and narrow bands

Quasar selection

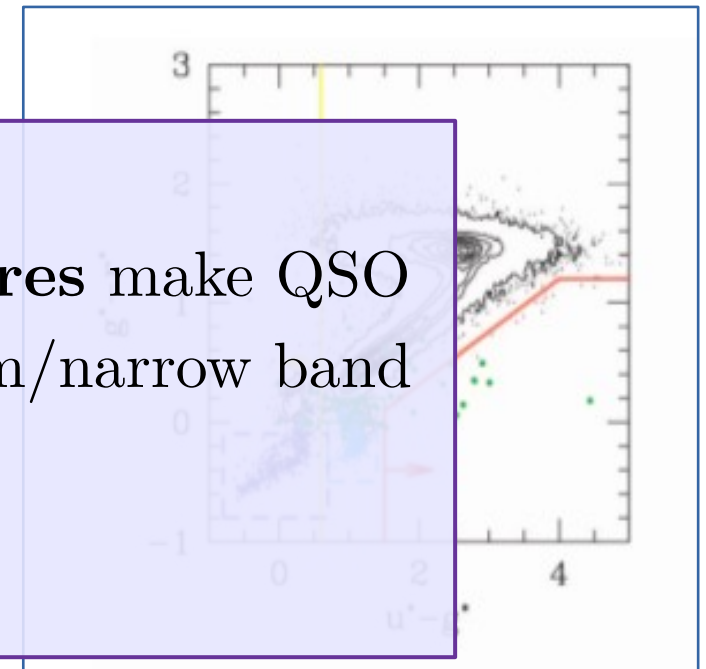

Vanden Berk et al 2001

Very **strong** and **broad** emission lines indicating Doppler widths up to 25000 km/s

Their **broad spectral features** make QSO particularly suited for medium/narrow band detection

Mid-z ($2.5 < z < 3$) problem

Richards et al. 2002

Quasars in medium and narrow bands

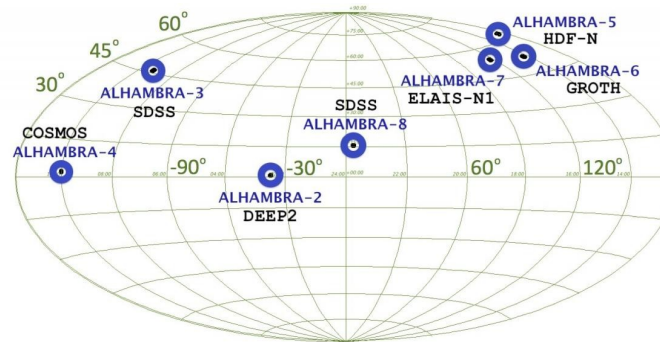

Testing the ground with the ALHAMBRA survey

**Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey**

Moles et al. 2008

Benitez et al. 2009

$\sim 2.8 \text{ deg}^2$
24.5 mag limit

The J-PAS survey: a picture of the sky in 56 colors

Quasars in medium and narrow bands

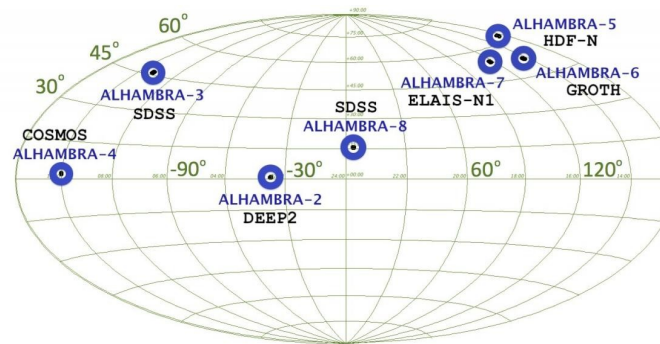

Testing the ground with the ALHAMBRA survey

Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey

Moles et al. 2008

Benitez et al. 2009

$\sim 2.8 \text{ deg}^2$
24.5 mag limit

Matute et al. 2012 tested the accuracy of photometric redshifts for the QSO in ALHAMBRA using the LePhare code (Arnouts et al. 1999, Ilbert et al. 2006)

The J-PAS survey: a picture of the sky in 56 colors

Quasars in medium and narrow bands

Testing the ground with the ALHAMBRA survey

**Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey**

Moles et al. 2008

Benitez et al. 2009

~2.8 deg²
24.5 mag limit

Two-step procedure:

- 1) Candidates selection
- 2) “Photometric confirmation”

The J-PAS survey: a picture of the sky in 56 colors

Quasars in medium and narrow bands

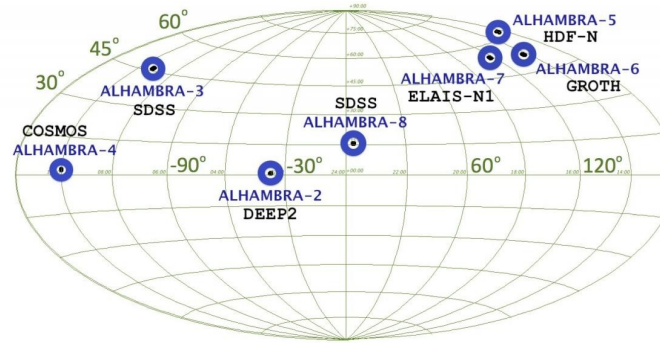

Quasar studies – testing the ground with the ALHAMBRA survey

Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey

Moles et al. 2008

Benitez et al. 2009

$\sim 2.8 \text{ deg}^2$

24.5 mag limit

Two-step procedure:

1) Candidates selection

2) “Photometric confirmation”

Using the photometric-redshift code LePhare
(Arnouts et al. 1999, Ilbert et al. 2006)

LePhare is run on the whole catalogue ($\sim 440,000$ objects), and we get out **$\sim 120,000$ candidates**

(No previous cuts in morphology, luminosity or colors)

Quasar studies – testing the ground with the ALHAMBRA survey

Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey

Moles et al. 2008

Benitez et al. 2009

$\sim 2.8 \text{ deg}^2$
24.5 mag limit

Two-step procedure:

- 1) Candidates selection
- 2) “Photometric confirmation”

Looking for emission lines...

Using a newly-developed **line-searching code**

- a) Calculates the expected locations of the major QSO broad emission lines, based on the photo-z given by LePhare
- b) Searches for excess in the photometry in the bands where emission lines are expected

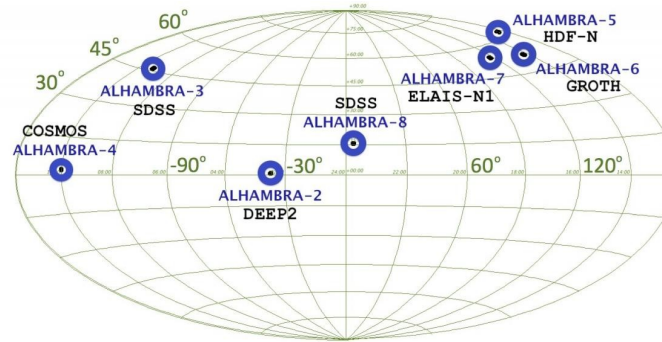

Quasar studies – testing the ground with the ALHAMBRA survey

Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey

Moles et al. 2008

Benitez et al. 2009

$\sim 2.8 \text{ deg}^2$
24.5 mag limit

Two-step procedure:

- 1) Candidates selection
- 2) “Photometric confirmation”

1921 QSO candidates at $z > 2$

1% redshift accuracy

No galaxy or stellar contamination

$\sim 55\%$ completeness – 100% purity

(Chaves-Montero et al., in prep)

Quasar studies – testing the ground with the ALHAMBRA survey

Advance Large Homogeneous
Area Medium-Band Redshift
Astronomical survey

Moles et al. 2008

Benitez et al. 2009

$\sim 2.8 \text{ deg}^2$
24.5 mag limit

Measuring large-scale structure with quasars in narrow-band filter surveys

Abramo et al. 2012

The J-PAS survey: a picture of the sky in 48 narrow-band filters

Quasars in narrow-band filter surveys

- 54 NB + 5 MB/BB filters
- 4.5 deg² FoV
- Up to mag ~24
- 90M ELG and LRG
- Reaching 0.3% photo-z precision
- Millions of quasars
- 200M of galaxies
- 4000 SNIa
- 700k of groups and clusters
- Starts at the end of 2016

Possible replica in the South

- 12 NB/MB/BB filters
- 2 deg² FoV
- Up to mag ~23
- SEDs of 5M stars
- Already started!

Already replica in the South
